

# De-Chlor<sup>™</sup>

## Dechlorination Additive

**Description:** De-Chlor<sup>™</sup> is a white granular crystal that neutralizes chlorine in municipal water. Chlorine in water supplies can destroy polymer drilling fluids.

**Recommended Use:** Pre-treat makeup water with De-Chlor prior to mixing polymer-drilling fluids to prevent premature breakdown, as well as to extend the yield and recycle life of polymer slurries.

<b>Characteristics:</b>	Appearance	White/ off-white granular
	Solubility	50 grams/100 grams cold water
	Density	1.69 lbs./ft <sup>3</sup>

**Advantages:**

- Increases slurry life
- Boosts performance up to 50% without adding primary polymer
- Stops chlorine from destroying polymer slurries
- Economical method for neutralizing chlorine

**Mixing and Applications:** Add ½ lb De-Chlor per 1000 gallons makeup water either through a venturi hopper or by sprinkling into the flow of water filling the borehole. Mix De-Chlor at the same time soda ash is added to the makeup water.

**Packaging:** 5 gal plastic pails, 32 pails per pallet. All pallets are plastic-wrapped.
